LarryBird Environment Baseline

Version inventory, compatibility, and support reference

Lucas Burlingham

2026-11-04

LarryBird

1 Software Version Document

This document lists the baseline software versions for the current environment and related support items.

1.1 Purpose

The purpose of this document is to provide a quick reference for installed software versions, support status, and compatibility assumptions.

1.2 Current Software Inventory

Component	Version	Status	Notes
Operating System	Windows 11 Pro	Active	Primary user environment
Quarto	1.11.9	Active	Used for document generation
Typst	Current project default	Active	Used for PDF rendering
Visual Studio Code	Current installed version	Active	Primary authoring environment
Git	Current installed version	Active	Source control

1.3 Compatibility Notes

- Quarto should be used from the project root to keep relative file references stable.
- Typst is the supported rendering engine for generated PDFs.
- Any document-specific metadata should remain project-scoped and consistent with the shared asset files.

1.4 Version Control Summary

- All project files should be tracked in source control.
- Updates to software versions should be recorded in this document when the environment changes.

1.5 Approvals

This document is intended as a working reference and should be reviewed whenever tooling or environment versions change.

1.6 Signatures
